COURSE OUTLINE

Dates and Locations

Your complete source for networking training!

The technician of today must be prepared to install and configure high-speed data communications equipment for DSL and Broadband services. This three-day course covers the concepts and skills necessary for the technician to install and configure the hardware while resolving potential problems.

Seminar participants will analyze hardware components, network concepts and common service problems. Technical concepts and procedures presented will be clearly illustrated using interactive instructor presentation and supplemented with hands-on activities.

- *LAN Protocols*
- *Ethernet Hardware*
- *Wireless Networking*
- *TCP/IP Protocol*
- *IP Addressing and Subnetting*
- *Broadband Router Configuration*
- *VPNs*
- *VOIP*
- *Network Security*
- *Troubleshooting*

Course Director

Doug Stromberg - Since 1981, Doug has been instructing in the fundamentals of communications systems. He has extensive knowledge of telecommunications and networking in field applications.
